

184.72.126.229

After running 'nmap 184.72.126.229 -Pn' and from using the IP Netblocks API, I found that this address is within the netblock 184.72.96.0 - 184.72.127.255, which is owned by the organization Amazon Data Services NoVa (the internet service provider), from Ashton, Virginia. Its Autonomous Service Number (ASN) is 14618 and its open ports include 53/tcp, which is running service "domain". The network has an open peering policy, meaning that this network can interconnect directly with any other to exchange traffic. However, there are no specific public or private peering exchanges for this address as far as I could research from PeeringDB's database.
